                  Biochem. Biophys. Res. Commun. 150:1275-1281(1988).
-!- FUNCTION: C-TERMINAL ALPHA-AMLDATION OF BIOLOGICAL PEPTIDES.
-!- CATALYTIC ACTIVITY: PEPTIDYLGLYCINE + ASCORBATE + O(2) =
PEPTIDYL(2-HYDROXYGLYCINE) + DEHYDROASCORBATE + H(2)O.
(THE PRODUCT IS UNSTABLE AND DISMUTATES TO GLYOXYLATE AND THE
CORRESPONDING DESGLYCINE PEPTIDE AMIDE).

CATALYTIC ACTIVITY: CARBAMOYL-PHOSPHATE + ASPARTATE =

ORTHOPHOSPHATE + N-CARBAMOYL-PHOSPHATE + ASPARTATE =

ORTHOPHOSPHATE + N-CARBAMOYL-SPHOSPHATE + ASPARTATE =

ORTHOPHOSPHATE + N-CARBAMOYL-SHOPHATE STED IN PYRIMIDINE BIOSYNTHESIS.

PATHWAY: FIRST AND SECOND STEP IN PYRIMIDINE BIOSYNTHESIS.

PATHWAY: PROSPHATE SYNTHASS PORM TOOFRANSFERASE) AND CPSASE

(CARBAMOYL PHOSPHATE SYNTHASS PORM TOOFRANSFERASE) STEP THE

GLUTAMINE-DEPENDENT CPSASE (GD-CPSASE) (EC 6.3.5.5).

MISCELLANEOUS: IN EUKARYOTES EC 6.3.5.5 IS SYNTHESIZED BY TWO

PATHWAY-SPECIFIC (ARGININE AND PYRIMIDINE) UNDER SEPARATE CONTROL.

SIMILARITY: THE CPSASE DOMAIN BELONGS TO TYPE-1 GLUTAMINE

SIMILARITY: THE GATASE DOMAIN BELONGS TO TYPE-1 GLUTAMINE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AND ATCASE) (BY SIMILARITY).

CATALYTIC ACTIVITY: 2 ATP + GLUTAMINE + CO(2) + H(2)0 -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .5); ASPARTATE CARBAMOYLTRANSFERASE (EC 2.1.3.2)].

-!- FUNCTION: C-TERMINAL ALPHA AMIDATION OF PEPTIDES.

-!- CATALYTIC ACTIVITY: PEPTIDYELIXCINE + ASCORBATE + O(2) =
PEPTIDYE(2-HYDROXYGLYCINE) + DEHYDROASCORBATE + H(2)O.

(THE PRODUCT IS UNSTABLE AND DISMUTATES TO GLYOXYLATE AND
CORRESPONDING DESGLYCINE PEPTIDE AMIDE).

-!- SUBCELLULAR LOCATION: SECRETORY GRANULES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Human peptidylglycine alpha-amidating monooxygenase: and functional expression of a truncated form in COS of Biochem.
